(Des)Aceleração

André Rangel Artist

Nano4Med Laboratory

(Des)Aceleração is a relational system between coherent light, bioactive molecules, velocity, glass, photoluminescence, volume, surface, algorithm and programming, in continuous variation. It is the outcome of a residency in which a dynamic intermedia system was created, articulating knowledge from a spectrum of activities and configuring conditions for a spatial, optical and chromatic experience.

FEUP, Library

18 May - 17 June 2022

Opening: 18 May, 17h30

The computer-controlled movement of the light beam, combined with the idiosyncrasies of the glasses, their heterogeneity, and that of the riboflavin, produces indeterminable phenomena of projection, reflection, refraction, and dispersion of light. In this system, coherent light ceases to be coherent. The laser beam is not used as a stylus but produces a visual experience that results from the coincidence of the predicted and determined with the unforeseen and indeterminate, of order with chaos.
